

Ston'Art Pebble is a durable and integrated surface solution suitable for use on **pool interior surfaces**. Unlike conventional pool finishes, the surface is not designed solely as a coating layer; instead, it is conceived as a system approach that addresses **structural durability, hygiene, and aesthetic performance together**.

With its natural texture, the surface offers a **comfortable and enjoyable** swimming experience while demonstrating high resistance to water and pool chemicals. Compared to existing pool interior surface solutions, it provides both **visual continuity** and **long-term performance** advantages.

The system can be produced in the desired color and texture options and can be applied to both **vertical and horizontal pool surfaces**, enabling spatial continuity and a seamless appearance. The surface structure, supported by pore-filling applications, prevents the formation of environments conducive to bacteria and algae growth, contributing to easier and more controlled hygiene. The textured surface enhances comfort while **reducing the risk of slipping**.

AREAS OF APPLICATION

- Pool interior surfaces
- Villa & residential complex pools
- Hotel & resort pools
- Spa & wellness areas
- Ornamental and wave pools
- All areas where impermeability is required

PERFORMANCE CHARACTERISTICS

Swimming Experience: Provides a comfortable and enjoyable swimming experience thanks to its natural stone texture and balanced surface structure. The surface is easy to manage in terms of daily cleaning and maintenance.

Anti-Slip: Ensures safe use even under wet surface conditions through its specially designed surface texture, offering performance that reduces the risk of slipping.

Chemical Resistance: Resistant to chlorine and pool chemicals used in pool water, maintaining surface performance and overall aesthetic integrity.

Thermal Shock and UV++ Resistance: Its UV-resistant structure provides long-term protection against color change and fading during outdoor use under direct sunlight.

Aesthetic Texture: Gives pool areas a premium character with its natural stone appearance, creating a strong surface effect that integrates seamlessly with architectural design. Comfortable for barefoot use.

Long-Lasting: When combined with recommended maintenance and protective applications, surface performance is preserved for many years, supporting long-term system continuity.

EXPERTISE OF PAYE CONSTRUCTION

Paye Construction **began** building its expertise in pool surface systems **15 years ago with stone carpet applications and has since advanced this experience by extending it to Pebble systems**.

Ston'Art Pebble manages the entire process holistically as a **reliable solution** partner, providing project-specific solutions and comprehensive post-application support.
